Education

University of Oregon **Sep 2023 – Jun 2027**

B.S. in Computer Science and Data Science *Eugene, Oregon*

GPA: **4.22 / 4.30** | Minors: Mathematics, Music Technology

Relevant Coursework: Parallel Computing, Databases, Deep Learning, Data Structures & Algorithms, Linear Algebra

Experience

T3 Code **Aug 2026 – Present**

Open Source Contributor *Remote*

- Contributed **100+** merged PRs to T3 Code, Theo Browne's coding-agent app with **40k+** stars and **700k+** users.
- Turned recurring bugs into lint rules so agents can't reintroduce them, like PR icons **6** PRs had patched one by one.
- Cut command palette stalls **80%+** by virtualizing results and fixing a CSS selector that restyled **4,300+** elements.
- Fixed server orchestration so a subagent's question wakes its parent agent instead of leaving both stuck for hours.
- Working directly with T3 Code's product manager to QA the unreleased redesign, landing **50+** fixes so far.
- Designed the t3.codes Open Graph social card shown in link embeds using the Paper Design tool.

QuackHacks **May 2026 – Present**

Software Engineer and Director of Finance *Eugene, Oregon*

- Organized the University of Oregon's largest hackathon with over **200** hackers and managed a budget of **$50,000**.

Oregon Networking Research Group **May 2025 – Present**

Undergraduate Researcher *Eugene, Oregon*

- Architected **ATLANTIS**: a **SvelteKit**, **TypeScript**, data processing and exploration platform for visualizing large-scale network telemetry, deployed on **Cloudflare Workers** with **D1** and **Drizzle ORM**.
- Built a parallelized **Rust** pipeline, turning **100+ TB** NetFlow datasets to **SQLite** tables for efficient analytic queries.
- Ported address-analysis routines from **Haskell** to **C++**, reducing processing time by **80%**.
- Benchmarked **PyTorch** GRU and XGBoost traffic forecasts; our experimental features gave no significant gain.

Projects

tagium | *React, TypeScript, Cloudflare Workers, Fly.io* **Aug 2025 – Present**

- Deployed tagium.app, a browser-local music tag editor with **1,500+** tracks tagged by **100+** users.
- Designed a format-detecting lossless metadata editing engine for MP3, FLAC, and M4A all behind a single interface.
- Ran a download queue with capped concurrency and retries, keeping error rates below **0.1%**.

L-Store Database | *Python, pytest* **Sep 2025 – Dec 2025**

- Led a team of 4 to build a lineage-based storage engine in **Python** (**80%+** test coverage via **pytest**).
- Designed a concurrent transaction system using strict 2PL with no-wait aborts to avoid deadlocks.

Leadership & Involvement

Album Listening Club **Jun 2024 – Present**

Co-President *Eugene, Oregon*

- Led weekly meetings and a **$2,000** budget for one of Oregon's largest student clubs, now **50+** weekly attendees.
- Ran local music events generating over **$10,000** in revenue and over **2,000** attendees across events.

Awards

Vice President for Research and Innovation Fellowship **Jun 2026 – Sep 2026**

$5,000 *research fellowship* *University of Oregon*

Bowerman Scholarship **Jun 2026**

$9,000 *nomination-based award* *University of Oregon*

Geoffrey Eric Wright Outstanding Junior Award **May 2026**

$3,000 *sole recipient* *University of Oregon Department of Computer Science*

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Rust, C/C++, Bash
Frontend: React, Svelte/SvelteKit, Next.js, Astro, Tailwind CSS, Vite, HTML, CSS
Backend & Data: PostgreSQL, SQLite, Supabase, Drizzle ORM
Infrastructure: Cloudflare (Workers, D1, R2), AWS (S3, CloudFront), Fly.io, Git, GitHub Actions, Bun, Node.js, Linux
Testing: Playwright, Vitest, pytest
